Project Name	Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer
Maximum Marks	5 Marks

Coding & Solution

This section summarizes the implemented solution: an automated standard laptop ordering process built on the ServiceNow platform using Service Catalog and Flow Designer.

Solution Summary

Field	Details
Repository Link / URL	[Paste your GitHub / GitLab link or ServiceNow instance / Update Set link here]
Programming Language(s)	Low-code (Flow Designer); JavaScript for optional client / server scripts
Framework(s) Used	ServiceNow Platform, Service Catalog, Flow Designer
Key Features Implemented	- Standard Laptop catalog item with variables (model, justification, deliverylocation) - Automated manager approval through Flow Designer - Automatic creation of fulfillment catalog task after approval - Request state updates and email notifications to the requester - Request status report / dashboard
Pending / Incomplete Features	- Integration with external vendor / procurement system - Automatic asset record creation on delivery - Retry handling for failed flow steps
Setup / Run Instructions	- Sign in to your ServiceNow Personal Developer Instance. - Import the Update Set (or recreate the catalog item and flow). - Activate the Standard Laptop Order flow in Flow Designer. - Assign approver and fulfiller roles to test users. - Open the Service Portal, order a Standard Laptop and verify approval, taskcreation and notifications.

Code Quality Checklist

S.No	Criteria	Status (Yes / No)
1	Code is modular and organized into functions / classes	Yes
2	Meaningful variable and function names are used	Yes
3	Code includes comments / documentation where necessary	Yes
4	Error handling is implemented for critical operations	Yes
5	The application runs without critical errors	Yes
6	Code is committed to a version control repository	[Yes / No]

Additional Notes / Comments:

The solution is built with a low-code approach, so most logic is configured in Flow Designer rather than hand-written code. The approval and task creation steps can be reused for other catalog items. Future work includes vendor integration and automatic asset creation.
