

Data Flow Diagram

Date	29 September 2026
Team ID	SWTID-2026-1180
Project Name	Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer
Maximum Marks	2 Marks

System Overview

A requester submits a standard laptop request through the service catalog. A ServiceNow Flow Designer flow automatically validates the request, routes it to the manager for approval, raises a purchase order with the vendor, and, on delivery, records the asset and notifies the requester. The diagram on the next page shows how data moves between the external entities, processes and data stores.

DFD Components

Type	Name	Description
External Entity	Employee (Requester)	Submits the laptop request; receives acknowledgement and delivery notifications.
External Entity	Manager (Approver)	Receives the approval request; returns approve / reject decision.
External Entity	Vendor / Supplier	Receives the purchase order; returns order confirmation and delivers the laptop.
Process 1	Request Submission	Validates the catalog request and stores it, then triggers the flow.
Process 2	Approval Handling	Flow Designer routes the request to the manager and records the decision.
Process 3	Procurement	Creates the purchase order for approved requests and sends it to the vendor.
Process 4	Fulfillment & Notification	Receives the laptop, creates the asset record, closes the request and notifies the employee.
Data Store	Laptop Catalog	Standard laptop models, specs and pricing available to order.
Data Store	Request Records	Request details, approval status and fulfilment status.
Data Store	Asset Records (CMDB)	Laptop serial number, assignee and asset state.
