

Solution Requirements

Date	29 September 2026
Team ID	SWTID-2026-1180
Project Name	Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer
Maximum Marks	4 Marks

Step 1: Functional Requirements (FR)

S.No	Requirement Category	Requirement Description	Priority (High/Medium/Low)
1	Authentication	Users log in with company SSO (SAML/Azure AD) on the ServiceNow instance; MFA is enforced. Only authenticated employees can open the Service Catalog and submit laptop requests.	High
2	Authorization levels	Roles: Employee (submit and track own requests), Manager (approve/reject team requests), Procurement Officer (create and manage purchase orders), IT Asset Manager (receive and assign assets), Admin (configure Flow Designer flows, catalog and reports). Access is role-based via ACLs.	High
3	External interfaces	Vendor/supplier ordering channel (email or REST API) for purchase orders and order confirmations; HR/AD directory for manager and department lookup; email/Teams notifications to users.	Medium
4	Transactions processing	Flow Designer flow triggers on catalog item submission, creates the request and approval records, generates the purchase order after approval, updates status on vendor confirmation, and creates the asset record on delivery. Each step is logged and retried on failure.	High
5	Reporting	Dashboards and reports for: requests by status, average approval and delivery time, laptops ordered per department/model, pending approvals, and spend. Reports can be exported to PDF/Excel.	Medium
6	Business rules, etc.	Only pre-approved standard laptop models are orderable. Requests are auto-approved or routed to the manager based on cost/policy thresholds. Approval reminders after 2 days; auto-escalation after 5 days. Duplicate open requests per employee are blocked.	High

7	Compliance to laws or regulations	Employee data handled per applicable data privacy laws (e.g., GDPR/IT Act); audit trail of approvals and purchases kept for financial audit; company procurement and asset management policies followed.	Medium
8	Other	Automatic email/in-portal notifications at each stage; request tracking for employees; asset tagging and assignment to the requester in the CMDB on delivery.	Medium

Step 2: Non-Functional Requirements (NFR)

S.No	NFR Category	Requirement Description	Target Metric / Acceptance Criteria
1	Performance & Speed	Catalog pages, forms and status updates must respond quickly; the automated flow should run without manual delay.	Pages load in < 3 seconds; flow triggers within 1 minute of submission
2	Scalability	The flow must handle growth in employees and order volume without redesign.	Supports 5,000+ users and 500+ concurrent requests
3	Security & Data Privacy	Role-based access, encrypted data in transit and at rest, and audit logging of all approvals and changes.	TLS 1.2+ in transit; AES-256 at rest; 100% actions audit-logged
4	Reliability & Availability	Platform and flows must stay available; failed flow steps are retried and reported to admins.	99.9% uptime per month; failed steps retried up to 3 times
5	Usability & Accessibility	Simple catalog form that a user can complete without training; accessible on desktop and mobile.	Request submitted in < 2 minutes; WCAG 2.1 AA compliant
6	Other (Maintainability)	Flows are built in Flow Designer with reusable actions and clear naming so admins can modify them without code.	Policy change made in < 1 day with no scripting
