

PHASE 7 – PROJECT DOCUMENTATION PHASE

Project Title

Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer

Objective

The objective of this phase is to document the implementation, configuration, workflow, and verification of the automated Standard Laptop procurement process.

Project Components

1. Problem Statement

The existing IT procurement process lacks efficiency and automation, particularly for Standard Laptop requests. Manual configuration and task handling can result in delays and inefficient resource allocation.

2. Proposed Solution

ServiceNow Flow Designer is used to automate the creation and assignment of Catalog Tasks for Standard Laptop requests.

3. Flow Configuration

- Flow Name: Standard Laptop Task
- Application: Global
- Run User: System User

- Trigger: Service Catalog
- Action: Create Catalog Task

4. Catalog Task Configuration

- Request Item: Requested Item Record
- Table: Catalog Task
- Short Description: Laptop need to Configured
- Description: Laptop need to Configured
- Assignment Group: Hardware
- Approval: Approved

5. Service Catalog Configuration

The Standard Laptop service catalog item is connected to the created flow through Maintain Items → Standard Laptop → Process Engine.

6. Verification Process

A Standard Laptop order is placed through the Service Catalog. After approval, the Requested Item and Catalog Task are checked to verify the updated status, short description, and assignment group.

Solution

The documentation records the complete workflow so that the implementation and verification process can be clearly understood and followed.

Expected Outcome

A clear project record is created containing the problem, solution, configuration, implementation steps, and verification process.

Phase Conclusion

The documentation provides a structured reference for the automated Standard Laptop procurement workflow.
