

PHASE 2 – REQUIREMENT ANALYSIS PHASE

Project Title

Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer

Objective

The objective of this phase is to identify the requirements needed to automate the standard laptop ordering and configuration process.

Functional Requirements

1. The system should allow users to place a Standard Laptop request through the Service Catalog.
2. The system should use a Service Catalog trigger.
3. The system should create a Catalog Task automatically.
4. The Requested Item Record should be used in the Catalog Task.
5. The task should contain the short description “Laptop need to Configured”.
6. The task description should contain the same laptop configuration requirement.
7. The assignment group should be Hardware.
8. The approval value should be Approved.
9. The Standard Laptop service should be connected to the created flow.

Non-Functional Requirements

- The process should reduce manual intervention.
- The workflow should improve processing efficiency.
- Tasks should be assigned appropriately.
- The process should reduce waiting time for users.

Solution

The requirements will be implemented using ServiceNow Flow Designer, Service Catalog, Catalog Tasks, Requested Items, and the Hardware assignment group.

Expected Outcome

The required system and workflow requirements are clearly identified for development.

Phase Conclusion

The requirement analysis provides the necessary functional and non-functional requirements for implementing the automated laptop procurement workflow.
