Project Title	Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer
Maximum Marks	5 Marks

Project Proposal (Proposed Solution) report

The proposal report aims to transform the IT procurement process by automating standard laptop orders using ServiceNow Flow Designer, boosting efficiency and accuracy. It tackles manual approval delays and errors, promising faster fulfillment, reduced costs, and happier employees. Key features include a Service Catalog request form, automated approvals and real-time status notifications.

Project Overview	
Objective	The primary objective is to streamline IT procurement by automating the ordering of standard laptops using Flow Designer, ensuring faster approvals and error-free fulfillment.
Scope	The project covers the end-to-end standard laptop request process: catalog request submission, manager approval, procurement/asset task creation, fulfillment and requester notification, all built on the ServiceNow platform.
Problem Statement	
Description	Standard laptop orders are currently handled through manual emails and follow-ups. This causes approval delays, missing information, duplicate effort for IT staff and poor visibility for employees.
Impact	Solving these issues will reduce turnaround time, minimize manual errors, lower the workload of the IT procurement team and improve employee satisfaction and organizational productivity.
Proposed Solution	
Approach	Design a Service Catalog item for standard laptops and use Flow Designer to automate the workflow: trigger on request, route approval to the manager, create fulfillment tasks, update the request state and notify the requester, with no custom code.

Key Features	- Service Catalog item with variables for laptop model, justification and delivery location. - Automated approval routing to the requester's manager. - Automatic creation of procurement and fulfillment tasks. - Real-time email and status notifications to the requester. - Reporting dashboard to track request status and turnaround time.

Resource Requirements

Resource Type	Description	Specification/Allocation
Hardware		
Computing Resources	CPU specifications, number of cores	Intel i5 or equivalent, 4 cores
Memory	RAM specifications	8 GB
Storage	Disk space for data and logs	256 GB SSD
Software		
Platform	Low-code cloud platform	ServiceNow (Personal Developer Instance)
Tools/Modules	Automation and catalog tools	Flow Designer, Service Catalog, Approvals, Notifications
Development Environment	Browser and studio	Google Chrome, ServiceNow Studio
Data		
Data	Source, size, format	Catalog items, user and group records, sample laptop requests (ServiceNow tables)
